Summary

Frontend / full-stack engineer with 5+ years of experience building React, TypeScript, Node.js, and AWS applications across Amazon, AWS, Bungie, and startup environments. Experienced in AI-assisted internal tooling, documentation-backed knowledge agents, configuration-heavy admin workflows, reusable UI infrastructure, and rapid React prototyping. Strongest in AI-native frontend interfaces, internal platforms, developer experience, prompt/workflow design, and translating ambiguous product requirements into deployable software.

Experience

Frontend Engineer II

Amazon - Seattle, WA

Dec 2024 - Present

- **Owned frontend development** for an internal ads-moderation platform as the only dedicated frontend engineer across a 200-person organization, delivering React/TypeScript interfaces for policy workflows.
- **Drove a team-wide AI adoption initiative** that increased active AI-tool usage from roughly 30% of engineers to full-team adoption through documentation, workflow examples, and hands-on enablement.
- **Established and led an org-wide frontend engineering community**, including a Slack channel, recurring office hours, technical knowledge-sharing posts, and frontend best-practice documentation.
- **Migrated team documentation into an AI-compatible knowledge base** and created specialized assistants for team support and SQL query workflows, improving access to operational knowledge for engineers and on-call owners.
- **Rebuilt a hardcoded restriction-management workflow** into a config-driven architecture; in a follow-on use case, this reduced implementation effort from roughly 5 days to 1 day.
- **Built reusable frontend infrastructure**, reducing non-business logic code by ~80%.
- **Developed a utility-first testing framework**, reducing unit test code length by 61%.
- **Reduced frontend unit-test execution time by 85%, build time by 53%, and build log output by 99.6%**, improving development feedback loops and build-debuggability.

Founder & Full-Stack Engineer

Self-Employed (Startup) - Seattle, WA

Feb 2024 - Aug 2024

- **Co-founded and led a startup**, overseeing all aspects of product development, strategy, and operations.
- **Designed and partially developed a full-stack web application** using React, TypeScript, and AWS, ensuring a scalable and robust architecture.
- **Created a Node.js API and an AWS RDS database** with geospatial indexing for location-based SQL queries, improving data retrieval efficiency by ~25%.

Front-end Engineer

Amazon Web Services - Seattle, WA

Jan 2023 - Feb 2024

- **Performed as one of only two front-end engineers** responsible for developing and maintaining the AWS Web Application Firewall (WAF) console.
- **Led a team of three engineers** to achieve 100% accessibility for the AWS WAF console, resolving over 320 accessibility violations and collaborating with the AWS accessibility team to address nuanced issues.
- **Provisioned 2 continuous deployment pipelines** from scratch, enabling frontend deployment across multiple environments and production regions, reducing deployment time by 50%.

Web Developer

Bungie - Bellevue, WA

Mar 2021 - Sept 2022

- **Developed and maintained product and game-related pages** as the primary web developer for the marketing department.
